

Sandblasting

PRIMEX INDUSTRIES is an exceptional service provider in the area of Sandblasting and Coatings. With a state of the art facility and trained personnel's, no project is too big or small.

Our services include Sandblasting and Protective Coatings in terms of Priming, Duracron, Duranar or Powder Coating finishes.

Sandblasting is the process of propelling abrasive from a small diameter nozzle to deliver a fine stream of abrasive to a surface under high pressure to remove any contaminants and get the part ready for coatings or galvanizing. From projects involving City light poles to BC Hydro Trucks to bridges and other building components, Primex Industries has been a very effective player in the market.

Our ability to provide a fast turnaround and quality service is the key to our success and we are confident that we can provide the same solution to your needs.
